

Waste Water Energy Recovery Assistance Program

PON-ENE-2014-025

Questions & Answers

(3/17/2014)

Q1: Do you have a list of wastewater treatment plants and sewage pumping station locations that you can provide? If not, can you direct us to someone in Massachusetts that does?

A comprehensive list of pumping stations is not available, but a list of Waste Water Treatment Plants is available on the website of the Massachusetts Department of Environmental Protection, on the following page:

<http://www.mass.gov/eea/agencies/massdep/water/approvals/graded-wastewater-treatment-plants-by-town.html>.

Q2: Do you have a list of potential bidders or interested parties that you are able to share?

At this point in time DOER does not have a list of interested parties that we can share. DOER does consider bringing vendors, interested host sites and developers together in the future to facilitate projects.

Q3: Is a drain water heat recovery system such as described on the following DOE webpage among the technologies DOER is looking to support through this Program Opportunity Notice?

(<http://energy.gov/energysaver/articles/drain-water-heat-recovery>)

This PON is not intended to support in building drain water heat recovery systems. For this PON the energy source should be waste water in public sewage systems. Drain water heat recovery is however an interesting energy efficiency measure, which could be supported as a custom project under Mass Save. It would therefore be advisable to contact the local utility in order to determine expected energy savings.
